An Internship Report

Of

YuvaIntern Web Development Internship

Submitted

To

School of Computer Science and Engineering
IILM University, Greater Noida, U.P.

In partial fulfilment of the requirement of degree of

B.Tech (Computer Science and Engineering)

By

Roll Number of Student: 2410031156

Name of Student: PRANAY KUMAR

Class: 3CSE23

Branch: B.Tech (Computer Science and Engineering)

CANDIDATE'S DECLARATION

I, PRANAY KUMAR, hereby declare that the internship report titled “YuvaIntern Web Development Internship” is the result of the work I carried out during my internship, submitted to fulfil the requirement for the award of the degree of Bachelor of Technology in Computer Science and Engineering. Wherever I have used the ideas or words of others, they have been acknowledged. This report has not been submitted to any other institute for any degree or diploma, and I accept full responsibility for any copyright violation in this regard.

Student Name: PRANAY KUMAR

Roll No.: 2410031156

ACKNOWLEDGEMENT

I would like to thank everyone who supported me during this internship. Their guidance, honest feedback and encouragement helped me complete the programme and write this report.

I am grateful to the YuvaIntern team for giving me a structured platform to gain practical web development experience through E-Governance & Digital Services tasks. I also thank IILM University, Greater Noida, and the faculty of the School of Computer Science and Engineering for their constant support. Finally, I thank my family for their blessings.

Internship Offer Letter

Dear Pranay,

We are pleased to extend to you this formal offer for an Internship position as **Junior Web Developer - E-Governance & Digital Services** at **YuvaIntern**. We were impressed with your background, skills, and enthusiasm, and we believe you will be a valuable addition to our team.

Internship Details:
- **Start Date:** July 29, 2026
- **End Date:** August 26, 2026
- **Duration:** 4 weeks
- **Location:** Remote

Key Responsibilities:
As a **Junior Web Developer - E-Governance & Digital Services** intern, you will work on tasks and projects related to As a Junior Web Developer in the E-Governance & Digital Services sector, you will be responsible for designing, coding, and modifying websites according to client specifications. You will collaborate with cross-functional teams to develop user-friendly interfaces and improve user experience..

Benefits & Learning Opportunities:
Throughout the duration of your internship, you will have the opportunity to:

- Develop practical skills in [relevant skills/tools].
- Gain hands on experience in [specific tasks/projects].

As part of joining our team, you may be required to sign a confidentiality or non-disclosure agreement. You are also expected to comply with all applicable company policies and regulations, which will be provided to you upon commencement.

Kounal Gupta
Founder, YuvaIntern

4. PROJECT DESCRIPTION

4.1 Introduction

This report describes the four-week remote internship I completed with YuvaIntern as a Junior Web Developer in the E-Governance & Digital Services track. The internship ran from 29 July 2026 to 26 August 2026 and forms part of my B.Tech (Computer Science and Engineering) programme at IILM University, Greater Noida.

The aim was to turn classroom knowledge of HTML, CSS, JavaScript and React into practical skills by building responsive, easy-to-use pages of the kind found on digital government-service portals. The work was project-based and done remotely, with tasks following client-style requirements. At the end, YuvaIntern issued a Certificate of Experience in association with the National Skill Development Corporation (NSDC).

4.2 Organization Profile

YuvaIntern is an online internship platform associated with NSDC. It offers students project-based internships in areas such as web development and digital services, so that they gain job-relevant skills through realistic tasks before entering the workforce. The programme is led by its founder, Kounal Gupta.

4.3 Problem Statement

Engineering courses teach the principles of web technologies, but students often get limited chances to build a complete interface from requirements to a working result. Ideas such as responsive layout, DOM-driven behaviour and reusable components can stay abstract without practice. This internship addressed that gap by applying a complete HTML, CSS, JavaScript and React workflow to E-Governance & Digital Services use cases.

4.4 Project Objectives

- Use HTML5 to create well-structured, semantic web pages.
- Build responsive layouts with CSS Flexbox and Grid.
- Add interactivity and form validation using JavaScript.
- Learn to develop reusable user-interface components with React.
- Design, code and modify websites according to client requirements.
- Work with team members to improve the user experience of digital-service pages.
- Complete all assigned tasks within the four-week period.

4.5 Scope of the Project

The work covered the front-end workflow end to end: reading requirements, structuring pages in HTML, styling them responsively, adding behaviour with JavaScript, and organising the interface into React components. It was carried out in a remote learning

environment and did not involve deployment to any live government system.

4.6 Technologies and Tools Used

- **Markup and styling:** HTML5, CSS3 (Flexbox, Grid)
- **Scripting:** JavaScript (DOM manipulation, events, form validation)
- **Library:** React (components and state)
- **Design approach:** responsive, mobile-friendly layouts
- **Working mode:** remote collaboration with the project team

4.7 System Architecture

The interfaces were built as a stack of layers, each with its own role:

- **Structure layer:** HTML5 gives each page its semantic content and structure.
- **Presentation layer:** CSS makes the pages adapt to desktop and mobile screens.
- **Behaviour layer:** JavaScript handles user events, validates forms and updates content dynamically.
- **Component layer:** React splits the interface into reusable components that manage their own state.
- **Integration layer:** The components are combined into complete pages that follow the client's requirements.

4.8 Methodology

The internship was organised week by week, as summarised below.

Week	Module	Description
1	Onboarding and Requirements	Introduction to the E-Governance & Digital Services domain, studying requirements, sketching wireframes and writing static HTML5 pages.
2	UI Development with CSS	Creating responsive layouts with Flexbox and Grid, styling forms and navigation menus, and designing portal-style pages.
3	Interactivity with JavaScript	Adding form validation, event handling and dynamic content updates through DOM manipulation.
4	Component Development with React	Rebuilding pages as reusable React components, managing state, connecting sample data and final testing.

Note: No stipend was associated with this internship.

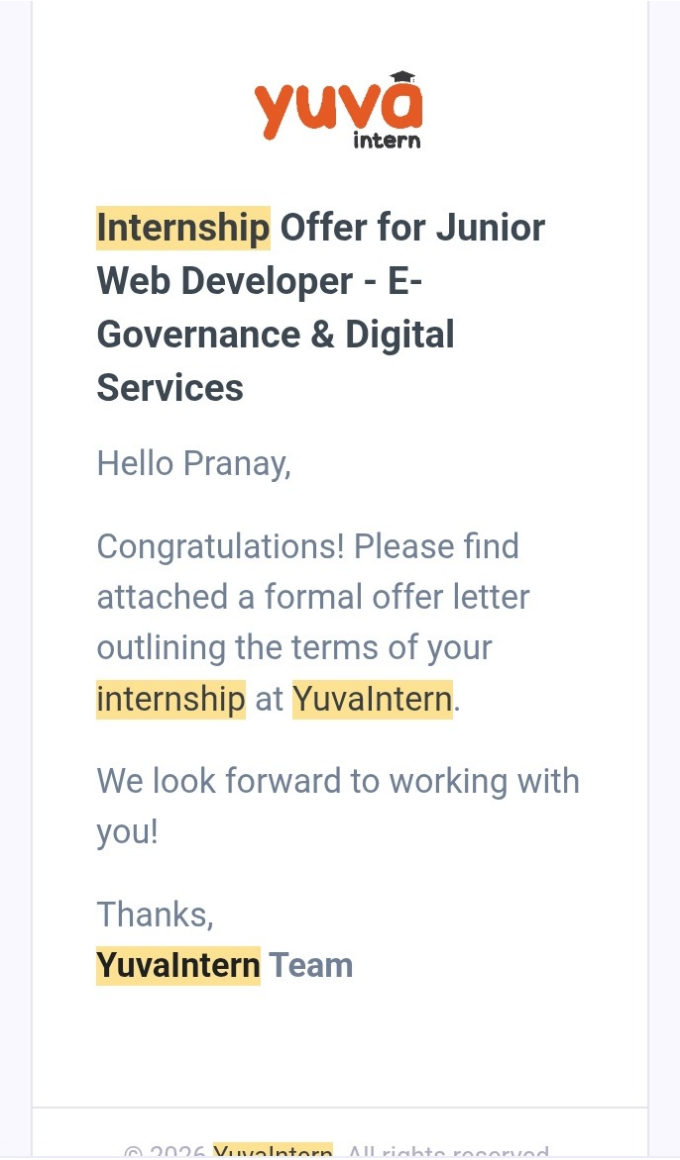

4.9 Outcomes

- Able to structure and build web pages with HTML5.
- Practical understanding of responsive design with CSS Flexbox and Grid.

- Hands-on experience with client-side interactivity and form validation in JavaScript.
- Able to build and manage reusable UI components in React.
- Able to design, code and modify websites to match client specifications.
- Completed the four-week internship and received a Certificate of Experience from YuvaIntern, in association with NSDC.

4.10 Certificate and Communication Proof

The Certificate of Experience issued by YuvaIntern, confirming completion of the internship as Junior Web Developer - E-Governance & Digital Services, is attached in Chapter 3. The offer letter is also there, and the offer e-mail I received from YuvaIntern is attached below as communication proof.

Internship Offer for Junior Web Developer - E-Governance & Digital Services

Hello Pranay,

Congratulations! Please find attached a formal offer letter outlining the terms of your internship at YuvaIntern.

We look forward to working with you!

Thanks,
YuvaIntern Team
